

# St. Andrews Marina

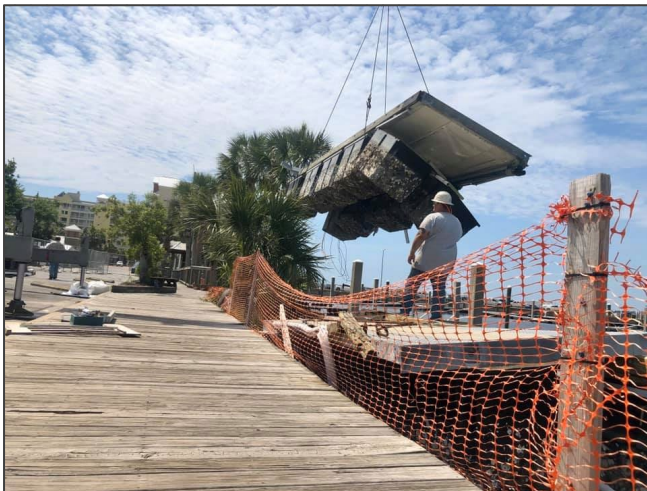

## Historical Background

The St. Andrews Marina has been a landmark for many of the City's waterfront activities since it opened in the 1960s. The Marina is a popular fueling spot for boaters and hosts numerous charter fishing boats, which take visitors and locals alike to fish in the pristine St. Andrew Bay.

Hurricane Michael caused significant damage to the Marina. Debris was left on the docks and in the water and sub-surface sand movement meant the Marina's channels were shallower than before the storm. In addition to the debris, the Marina's infrastructure was heavily damaged, leaving docks, boat slips, and walkways in need of repairs. To this day, the Marina's slips are limited.

## Recovery Progress

The City began clearing debris from St. Andrew's Marina in April of 2020. The contracted debris-hauling company removed damaged docks, boat slips, and sub-surface debris from the area. The project was completed in the summer of 2020, and the City will soon begin requesting proposals for the installation of two new docks and a boat ramp.

In addition to repairing what was damaged during Hurricane Michael, this recovery project offers the opportunity to create a waterfront space that is better than before the storm.
